SUBJECT INDEX

Adhesion
adhesion theories of transfer and wear during sliding of metals, 223
2-Amino-BTBTCs
role of certain substituted 2-amino-benzothiazolylbenzoylthiocarbamides as additives in extreme pressure lubrication of steel bearing balls, 345

Bearings
analytical prediction of cavity interface and bearing performance in a short bearing with circumferential feeding, 237
role of certain substituted 2-amino-benzothiazolylbenzoylthiocarbamides as additives in extreme pressure lubrication of steel bearing balls, 345
three-dimensional laminar and turbulent lubrication in journal bearings, 263

Catalytic effects
thermal and catalytic effects on tribopolymerization as a new boundary lubrication mechanism, 85
Cavities
analytical prediction of cavity interface and bearing performance in a short bearing with circumferential feeding, 237
Ceramics
tribological transition phenomena of ceramic materials, 373
tribology of ceramics, 117
Chromium
fretting fatigue of a $2\frac{1}{2}$%NiCrMoV low pressure turbine shaft steel — the effect of different contact pad materials and of variable slip amplitude, 281
Crack initiation
crack initiation criteria in fretting fatigue, 329

Elastohydrodynamic lubrication
numerical analysis of the elastohydrodynamic lubrication of elliptical contacts, 299
Erosivity
erosivity of atmospheric fluidized bed combustor particles 600 μm in diameter, 359

Fatigue
crack initiation criteria in fretting fatigue, 329
fretting fatigue of a $2\frac{1}{2}$%NiCrMoV low pressure turbine shaft steel — the effect of different contact pad materials and of variable slip amplitude, 281
Fluidized bed combustors
erosivity of atmospheric fluidized bed combustor particles 600 μm in diameter, 359
Fractal characterization
fractal characterization and simulation of rough surfaces, 313
Fractals
fractals, engineering surfaces and tribology, 141
Fretting
crack initiation criteria in fretting fatigue, 329
fretting fatigue of a $2\frac{1}{2}$%NiCrMoV low pressure turbine shaft steel — the effect of different contact pad materials and of variable slip amplitude, 281
Friction
fundamental experimental studies in tribology: the transition from "interfacial" friction of undamaged molecularly smooth surfaces to "normal" friction with wear, 65
Glass
wear transition mechanism in glass, 255

Interfaces
analytical prediction of cavity interface and bearing performance in a short bearing with circumferential feeding, 237
fundamental experimental studies in tribology: the transition from "interfacial" friction of undamaged

© Elsevier Sequoia/Printed in The Netherlands

molecularly smooth surfaces to "normal" friction with wear, 65

Journal bearings
three-dimensional laminar and turbulent lubrication in journal bearings, 263

Lubrication
mixed lubrication, 99
role of certain substituted 2-aminobenzothiazolylbenzoylthiocarbamides as additives in extreme pressure lubrication of steel bearing balls, 345
numerical analysis of the elastohydrodynamic lubrication of elliptical contacts, 299
thermal and catalytic effects on tribopolymerization as a new boundary lubrication mechanism, 85
three-dimensional laminar and turbulent lubrication in journal bearings, 263
transition temperatures and tribochemistry of the surfaces under boundary lubrication, 135

Magnetic media
magnetic media tribology: state of the art and future challenges, 169
Molybdenum
fretting fatigue of a $2\frac{1}{2}$%NiCrMoV low pressure turbine shaft steel — the effect of different contact pad materials and of variable slip amplitude, 281

Nickel
fretting fatigue of a $2\frac{1}{2}$%NiCrMoV low pressure turbine shaft steel — the effect of different contact pad materials and of variable slip amplitude, 281

Sliding
adhesion theories of transfer and wear during sliding of metals, 223
Space
space and vacuum tribology, 157
Steels
role of certain substituted 2-aminobenzothiazolylbenzoylthiocarbamides as additives in extreme pressure lubrication of steel bearing balls, 345

Surfaces
fractals, engineering surfaces and tribology, 141
fundamental experimental studies in tribology: the transition from "interfacial" friction of undamaged molecularly smooth surfaces to "normal" friction with wear, 65
transition temperatures and tribochemistry of the surfaces under boundary lubrication, 135

Thermal effects
thermal and catalytic effects on tribopolymerization as a new boundary lubrication mechanism, 85
Third-bodies
third-bodies in tribology, 29
Transfer
adhesion theories of transfer and wear during sliding of metals, 223
Transition temperatures
transition temperatures and tribochemistry of the surfaces under boundary lubrication, 135
Tribochemistry
transition temperatures and tribochemistry of the surfaces under boundary lubrication, 135
Tribology
fractals, engineering surfaces and tribology, 141
science to the practice in tribology, 207
fundamental experimental studies in tribology: the transition from "interfacial" friction of undamaged molecularly smooth surfaces to "normal" friction with wear, 65
future trends in tribology, 19
investigating a tribological failure, 199
magnetic media tribology: state of the art and future challenges, 169
main trends in tribological development in the U.S.S.R., 47
space and vacuum tribology, 157
third-bodies in tribology, 29
tribological transition phenomena of ceramic materials, 373
tribology of ceramics, 117
tribology — origin and future, 1
Tribopolymerization
thermal and catalytic effects on tribopolymerization as a new boundary lubrication mechanism, 85

Vacuum
space and vacuum tribology, 157
Vanadium
fretting fatigue of a $2\frac{1}{2}$%NiCrMoV low pressure turbine shaft steel — the effect of different contact pad materials and of variable slip amplitude, 281
Wear
adhesion theories of transfer and wear during sliding of metals, 223
fundamental experimental studies in tribology: the transition from "interfacial" friction of undamaged molecularly smooth surfaces to "normal" friction with wear, 65
wear transition mechanism in glass, 255
